

Water Conservation Tips

Most households use the vast majority of their water indoors. This drives utility costs up and is detrimental to our environment. As water shortages increase worldwide, it is important that we all use water as efficiently as possible.

- On average, 10 gallons per day of your water footprint is lost to leaks. Short of installing new water-efficient fixtures, one of the easiest most effective ways to cut your footprint is by repairing leaky faucets and toilets.
- Every time you shave minutes off your use of hot water, you save energy and keep dollars in your pocket.
- Nearly 22% of indoor home water use comes from doing laundry. Save water by making sure to adjust the settings on your machine to the proper load size.
- Don't let the faucet run while brushing your teeth or shaving.
- Water your lawn during the early morning hours only, this is when less evaporation occurs.
