

Village of Hoffman Estates Village Green Revitalization Project Master Plan

Project Background:

In April 2017, the Village Green Ad Hoc Committee was formed and charged with exploring new options to maximize the Village Green to its highest potential. Following completion of the Western Area Plan by the Lakota Group in Spring 2019, the Ad Hoc Committee determined the next step would be hiring a consultant to create a master plan and explore phasing of construction at the Village Green and adjacent public rights of way. These efforts would take into account casual daily use by local employees and residents of the Village, periodic large events, the rapidly growing beer garden component, and other potential recreational use opportunities.

In November 2019, Tria Architecture (along with their team of HR Green, Inc. for engineering and JSD Professional Services, Inc. for landscaping), was hired by the Village to complete a master plan, including a phasing plan.

Project Master Plan:

Following the completion of Phase I of the Village Green Revitalization Project, a number of additional elements to the Village Green have been considered. Such projects include an ice rink, built in fire pits, a gateway arch, new trees and plantings, and more parking. The Master Plan is subject to change. Inspiration for elements of the Master Plan can be found in the conceptual imagery prepared by Tria Architecture below.
